

Two women demonstrate a pellet stove in China.

## Radha's Message

Dear Friends,

I just returned from a busy week in China, and I am pleased to share that I saw strong progress in the country's effort to increasingly make clean cooking a reality for many, both domestically and internationally. Through market-based pilots in six provinces, the Ministry of Agriculture has made consistent efforts to help transition people away from using coal and wood for cooking and heating. These multi-fuel pilots have provided lessons that are now helping bring them to scale. As a result, other provinces have expressed interest in piloting their own clean cooking interventions.

Through these pilots, the benefits of processing biomass into pellets is becoming clear—for increasing combustion efficiency as well as benefitting livelihoods at the local level. Going forward, we are committed to expanding these efforts by working with the Ministry to include lessons learned into the design of the next Chinese Five-Year Plan. We will also work to incorporate clean cooking into President Xi's new Rural Revitalization initiative, launched during China's 19th National Congress of the Communist Party last October.

## Funding Opportunities

The Global Alliance for Clean Cookstoves is a United Nations Foundation-hosted public-private partnership to save lives, improve livelihoods, empower women, and protect the environment by creating a thriving global market for clean and efficient household cooking solutions. The Alliance's goal calls for 100 million households to adopt clean and efficient stoves and fuels by 2020. The Alliance is working with over 1800 public, private, and non-profit partners to accelerate the production, deployment, and use of clean cookstoves and fuels in the developing world.
